Special Help for Handicapping the Full Race Cards on Triple Crown Saturdays

For ALL-Ways handicappers:

Special Triple Crown Saturday Handicapping Profiles are posted on both the Frandsen Publishing and BRIS Web sites.

For non ALL-Ways users:

Even if you are not an ALL-Ways user, you will gain valuable insights from reading this newsletter. And, instructions for using ALL-Ways Software like a "Tip Sheet" for Triple Crown Saturdays are posted on the Frandsen Publishing Web site. This makes it possible to use the concepts presented in this newsletter without having to learn all the details about the software. See the last page of this newsletter for more information.

Spring and Summer Race Meets

Low cost ALL-Ways Batch Download Files for past races and low cost ALL-Ways Meet Subscription Plans for future races are now available on the ALL-Ways Data File page on the BRIS Web site.

Handicapping the 2011 Triple Crown Races and the Full Saturday Race Cards

Three different horses won the three Triple Crown races in 2010. We have now gone 32 years without a Triple Crown winner since Affirmed accomplished the feat in 1978.

This article builds on the concepts we first introduced for last year's Triple Crown Saturdays in 2010. Well, they worked great in 2010 just as they did in 2009. You will want to consider using them again this year. In this article, we will present some ideas for handicapping the three specific Triple Crown races in 2011. Then we turn our attention to handicapping the full race cards on the three Triple Crown Saturdays.

"Heads Up"

Be sure to pay close attention to the discussion later in this newsletter about the Best Late/Best Early Group. **It may well be the single most valuable piece of handicapping information you will use for handicapping the full race cards on Triple Crown Saturdays!**

The Kentucky Derby “The Run for the Roses”

The 137th running of the Kentucky Derby will take place at Churchill Downs on May 7, 2011.

The Kentucky Derby is one of the most difficult races to handicap, virtually every year. The race has 3-year old horses that are still maturing, racing against the toughest competition they have ever faced, running in a generally fast paced race, trying to run the longest distance thus far in their young careers (1 1/4 mile) and doing all of this facing the largest field of horses they will ever face in their entire careers. **Favorites simply do not win the Derby very often.** The statistics below focus on the Derby winners from 2000 through 2010, but excluding the 2005 and 2009 races that were won by 50-1 “Giacomo” and 51-1 “Mine That Bird” respectively.

Races Won by a Horse Ranked in the *Top 3* for the Factor (Kentucky Derby)

Factor	Races Won
BRIS Speed 2/3	8 of 9
BRIS Combined 2/3	8 of 9
BRIS Late 2/3	7 of 9
BRIS Prime Power	7 of 9

Combined Pace = Early Pace + Final Fraction

Late = Final Fraction Pace + Speed

Prime Power = A comprehensive rating

2/3 = Average for the best 2 out of last 3 races

This shows that 8 of the 9 Kentucky Derby winners ranked in the top three of the BRIS Speed 2/3 and the BRIS Combined 2/3 factors. BRIS figures are standard in ALL-Ways Software. ALL-Ways Software also includes the unique Hall pace and speed figures that use the concept of “conservation of energy” to normalize the pace and speed figures to the exact distance of today’s race. ALL-Ways Software also includes a Comprehensive Rating similar to the BRIS Prime Power Rating. The chart below shows the results of using both sets of factors.

Races Won by a Horse Ranked in the *Top 3* for the Factor (Kentucky Derby)

Factor	Races Won
BRIS or Hall Speed 2/3	9 of 9
BRIS or Hall Combined 2/3	9 of 9
BRIS or Hall Late 2/3	7 of 9
BRIS Power or ALL-Ways Comp.	9 of 9

This shows us that every winning horse in these 9 Kentucky Derby races was ranked in the top 3 for BRIS and/or Hall Speed 2/3 **AND** for BRIS and/or the Hall Combined 2/3 **AND** for BRIS Prime Power and/or ALL-Ways Comprehensive.

Handicapping the Kentucky Derby

Both the 2009 and 2010 Kentucky Derby races had 20 horse fields. One good way to approach the Kentucky Derby is to start by trying to reduce the number of horses in this large field that you will give serious consideration to for your wagers. Some horses will just jump out at you as not having a chance to finish in-the-money. Later in this article, we will present some effective methods to reduce the number of horses you consider.

Pace: Most Kentucky Derby races are run at a fast early pace. The 2010 Kentucky Derby had a very fast ALL-Ways Race Pace Shape of “EEE” There are two particularly strong ways to help assess if a horse can handle the pace. One is to look at how the horse ran in its past performance race(s) where the early pace pressure was strong. Using the ALL-Ways Past Performance handicapping report, look for races that had a Quirin Race Shape of “FF” or “FP”. These mean the race had a “Fast” early pace and a fast final time (“FF”) or the race had a fast early pace and a Par final time (“FP”). If the horse did well, it's a player. If it did poorly, it will likely have trouble today. **If the 2011 race has a fast early pace, you will want to give extra credit to the best late running horses with running styles of “P” or “S”, particularly those that rank high in the ALL-Ways Best Late Group.**

Distance: None of the horses will have run the 1 1/4 mile distance before. However, many of the horses will have run in a 1 1/8 mile race. We look at these past performance races to see if the horse did well, did just OK or did poorly. We particularly look for horses that were gaining ground or extending their lead down the stretch. **Again, the long distance of the Derby favors closers.**

The Preakness "The Run for the Black-Eyed Susans"

The 2011 edition of the Preakness will be run on May 21st at the Pimlico race track in Baltimore, Maryland. The Preakness is a 1 3/16 mile dirt race. The Pimlico track has somewhat longer straightaways and sharper turns than Churchill Downs. The field sizes since 2000 have averaged around 11 horses. The 2010 Preakness had 12 horses. The Preakness is not as difficult to handicap as the Kentucky Derby. With that said, the Preakness is still a very competitive and high class race. It is still a race for rapidly maturing 3-year olds. One important added handicapping complexity is that the Kentucky Derby horses running in the Preakness are coming back in only two weeks after competing in one of the toughest races they will ever encounter.

The statistics below focus on all eleven Preakness winners from 2000 through 2010.

Races Won by a Horse Ranked in the Top 3 for the Factor (Preakness)

Factor	Races Won
True Dirt Speed	10 of 11
BRIS Speed 2/3	10 of 11
Hall Speed 2/3	10 of 11
BRIS Prime Power	10 of 11
ALL-Ways Comp	9 of 11
BRIS Power or ALL-Ways Comp.	11 of 11

**True Dirt Speed = average speed on dry dirt at the same
distance category of today's race (sprint or route)**

Handicapping the Preakness

Normal handicapping approaches work well for the Preakness. One thing to note is that 23 of the 33 in-the-money finishers since 2000 were either Presser "P" horses or Sustainer "S" horses. The remaining 10 horses were either Early "E" horses or Early Pressers "EP". This indicates the Best Early/Best Late strategy should work well for Exacta and Trifecta wagers. The Preakness is notorious for low win payoffs and 2010 was no exception with "Looking at Lucky" winning and paying only \$6.80. But, the Exacta paid \$181 and the Trifecta paid \$2,771. These wagers types frequently pay well on Preakness Saturdays.

Belmont Stakes "The Run for the Carnations"

The 143rd running of the Belmont Stakes, the third and final leg of the Triple Crown, will take place at Belmont Park on June 11, 2011.

Handicapping the Belmont Stakes

An interesting fact: In the years since we last had a Triple Crown winner (Affirmed in 1978) there have been eleven horses that won both the Kentucky Derby and the Preakness, but then failed in the Belmont Stakes. The two big handicapping challenges are the length of the race (1 1/2 miles) and, in the case of horses who competed in the Kentucky Derby and/or the Preakness, the ability of the horses to handle such a demanding race after such a short layoff between races. From a distance standpoint, we obviously need to find horses that did well in their prior long races in terms of gaining ground down the stretch. Horses that were "backing up" at the end of the Kentucky Derby or the Preakness are probably not good candidates to win the Belmont Stakes. From a stamina standpoint, we want to find horses that have come back to do well after a short layoff.

Here are some statistics for the in-the-money finishers in the Belmont Stakes since 2000 excluding the 2002 race which was won by Sarava at 70 to 1 odds. (The Hall pace and speed figures did find Sarava.)

In-the-Money Performance of Top Ranked Horses for the Factor (Belmont Stakes)

Factor	Win Top 3	Place Top 4	Show Top 4
BRIS Class	6 of 10	9 of 10	6 of 10
BRIS Speed 2/3	7 of 10	8 of 10	7 of 10
True Dirt FF	7 of 10	9 of 10	6 of 10
BRIS CMB 2/3	6 of 10	7 of 10	7 of 10
BRIS Late 2/3	7 of 10	8 of 10	8 of 10
Comprehensive	6 of 10	8 of 10	7 of 10
BRIS Power	5 of 10	9 of 10	4 of 10

FF = Final Fraction Pace

Using BRIS Speed 2/3 as an example, 7 of the 10 win horses were ranked in the top 3 of BRIS Speed 2/3, 8 of the 10 place horses ranked in the top 4 of BRIS Speed 2/3 and 7 of the 10 show horses were ranked in the top 4 of BRIS Speed 2/3.

Handicapping the Full Race Cards on Triple Crown Saturday

Now, we turn our attention to handicapping all the races on the three Triple Crown Saturday race cards. Specifically, we discuss ways to dramatically narrow down the field of horses you consider for your wagers, on average by about 40%. After applying these methods, here is how the remaining horses did in the 2009 and 2010 Triple Crown Saturday races.

Top 4 Finishers After Eliminating Approximately 40% of the Fields

2009 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL
RACES	13	13	13	39
WIN	12	12	13	37 of 39
PLACE	12	12	13	37 of 39
SHOW	13	12	10	35 of 39
4TH	12	12	11	35 of 39
	49 of 52	48 of 52	47 of 52	144 of 156

2010 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL
RACES	13	13	13	39
WIN	13	12	13	38 of 39
PLACE	12	12	11	35 of 39
SHOW	13	11	12	36 of 39
4TH	11	12	12	35 of 39
	49 of 52	47 of 52	48 of 52	144 of 156

Using the 2010 figures, here is how to read this chart. On the Churchill Downs card, all 13 winners and all 13 show horses were included. Only one place horse and two fourth place horses were missing. Also, 38 of the 39 winners in these 39 races were accounted for, with only one horse missing. **In both years, the remaining horses accounted for a whopping 144 of the 156 win, place, show and 4th place finishers. Only 12 of the 156 top four finishers were missing in all 39 races! Later in this article, we will provide some ideas for identifying some of these 12 missing horses as well.**

Now, let's look at how this handicapping concept works.

(Continued)

The Four Groups

Four features in ALL-Ways can be viewed as being “groups” of horses that are qualified to be in the “group”. We are going to cover each group individually and show how well they did for the full race cards on Triple Crown Saturdays. Each group is impressive by itself, but don't get “hung up” on a single group. Towards the end of this article we will summarize how these groups all worked together. The four groups are:

- 1) “Contenders”
- 2) “Key Horse Candidates”
- 3) “Best Late/Best Early Horses”
- 4) “Top 10 Speed Performances”

ALL-Ways software does a tremendous amount of analysis “behind the scenes” to determine the horses that are qualified for each of the four groups. It is a good idea to take advantage of all this work automatically being done for you. So, we do suggest starting your handicapping with these four groups, but then add some of your own handicapping and wagering skills to the effort.

Percentage of the Full Fields in Each Special Group on Triple Crown Saturdays

2009 Triple Crown Saturdays

	CDX	PIM	BEL
Full Fields	124	112	122
Contender	50%	55%	48%
Key Horse	42%	46%	43%
Best Late/Early	49%	54%	49%
Top 10 Speed	56%	59%	57%

2010 Triple Crown Saturdays

	CDX	PIM	BEL
Full Fields	123	116	120
Contender	52%	55%	54%
Key Horse	42%	45%	43%
Best Late/Early	45%	53%	53%
Top 10 Speed	57%	58%	59%

A very important note about these four groups is that a horse, more often than not, will qualify to be in more than one of the four groups.

(Continued)

Now, we will look at each of these groups with respect to the 2009 and 2010 Triple Crown Saturday race cards. Remember there were a total of 358 horses and 359 horses that raced in the 39 races run on these three race days in 2009 and 2010 respectively.

1) The “Contender” Group

ALL-Ways uses comprehensive handicapping information about every horse in the race to make horse-to-horse comparisons and then classifies some horses as Contenders. These Contenders, on average, generally account for about half the field. The chart below shows how well these designated "Contenders" performed in 2009 and 2010. Remember, this is just for one group. The real power comes from looking at all four of the groups which we will cover a little further on in this article.

Number of Top 4 Finishers in the “Contenders” Group

2009 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL
Races	13	13	13	39
WIN	11	11	11	33
PLACE	11	8	13	32
SHOW	8	12	8	28
4TH	8	8	9	25

2010 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL
Races	13	13	13	39
WIN	9	10	10	29
PLACE	9	9	9	27
SHOW	10	6	8	24
4TH	8	9	5	22

No Triple Crown Saturday races were excluded. For example, the two missing win horses at Churchill Downs in 2009 are “Mine That Bird” that paid \$103.40 to win in the Kentucky Derby and “Jazz in the Park” that paid \$35.20 to win in the 5th race. And, “Jazz in the Park” was picked up in all three of the other groups we discuss below. The win and place numbers are particularly strong for both 2009 and 2010, with the 2010 figures indicating slightly more contentious races. Regarding the individual Triple Crown races, in 2009 ALL-Ways narrowed down the Kentucky Derby field from 20 horses to only 6, the Preakness field from 13 horses to only 6 and the Belmont field from 10 horses to only 5. The numbers in the more contentious 2010 races were 7 of 20 in the Derby, 7 of 12 in the Preakness and 6 of 12 in the Belmont Stakes.

2) The “Key Horse Candidates” Group

Once again, ALL-Ways uses extensive information to identify four horses from which you may want to select a Key Horse for your wagers. Four horses are designated as Key Horse Candidates so you can exclude the favorite and still have three non-favorite Key Horse possibilities. The automatic process internal to ALL-Ways focuses mainly on the best win and place candidates, but also includes some analysis of the show position. Here is how many of the win, place and show horses came out of the Key Horse Group in 2009 and 2010.

Number of Top 3 Finishers in the “Key Horse” Group

2009 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL
Races	13	13	13	39
WIN	12	10	9	31
PLACE	10	7	11	28
SHOW	7	8	6	21

2010 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL
Races	13	13	13	39
WIN	9	10	9	28
PLACE	9	8	9	26
SHOW	8	7	8	23

Looking at 2009, this chart shows us that 79% of winning horses (31 of 39), 72% of place horses (28 of 39) and 54% of show horses (21 of 39) were ALL-Ways designated "Key Horse Candidates". Indeed 68% of all in-the-money horses were “Key Horse Candidates”. The percentages in 2010 were 72% win (28 of 39), 67% place (26 of 39) and 59% show (23 of 39). Once again, only four horses are in this group in a race! **One very effective way to select the non favorite Key Horse to use in your wagers is to look for “Key Horse Candidates” that are also in one or more of the other three groups.**

3) The “Best Late/Best Early” Group

The Search Handicapping Report in ALL-Ways includes a list of horses that ALL-Ways considers to be the Best Late horses in the race and it includes a separate list of horses that ALL-Ways considers to be the Best Early horses in the race. ALL-Ways uses the BRIS Late factor (Final Fraction plus Speed) and BRIS Total factor (Early Pace plus Speed) to make these determinations. It is possible for a horse to be in both lists which makes it a “Dual Qualifier”. ALL-Ways also looks at horses with the top Hall Late 2/3 Ratings and top Hall Total 2/3 Ratings to see if any other horses should be included. Again, the Hall figures are normalized to the exact distance of today's race.

The place to start your handicapping in this “Best Late/Best Early” Group is to just look at the Best Late horses. Then, check the Best Early horses to see if you think a horse should be added for

your consideration. We will discuss how to do this a little further down. Here is how many of the top four finishers were in the “Best Late/Best Early” Group.

Number of Top 4 Finishers in the “Best Late/Best Early” Group

2009 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL	
Races	13	13	13	39	
WIN	12	12	11	35	
PLACE	11	10	12	33	
SHOW	11	10	8	29	
4TH	9	9	9	27	
Total	43	41	40	124	
Late	37	36	34	107	(86%)
Early Only	6	5	6	17	(14%)

2010 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL	
Races	13	13	13	39	
WIN	11	12	12	35	
PLACE	11	10	10	31	
SHOW	12	8	11	31	
4TH	8	9	11	28	
Total	42	39	44	125	
Late	34	31	33	98	(78%)
Early Only	8	8	11	27	(22%)

One of the things this chart shows us is that a whopping 35 or the 39 winners in both 2009 and 2010 were in the Best Late/Best Early Group. Place, show and 4th place horses were strong as well.

Here is a very important point, perhaps the most valuable piece of handicapping information you will use for handicapping the full race cards on Triple Crown Saturdays!

An overwhelming majority of the top four finishers shown in the chart above were in the Best Late List. A much smaller number were only in the Best Early List. In 2009, 86% (107 of 124) of the horses in the Best Late/Best Early Group that finished in the top four finish positions were in the Best Late List. Only 17 of the horses were in only the Best Early List. In 2010, 78% (98 of 125) top 4 finishers were in the Best Late List and only 27 of the horses were in only the Best Early list. The ALL-Ways Best Late List is an extremely powerful tool for finding the win, place, show and fourth place finishers on Triple Crown Saturdays. This includes most of the high priced surprises.

4) “Top 10 Speed Performances” Group

Now we turn to the “Top 10 Speed Performance” Group, the last of our four groups. ALL-Ways looks at the five most recent races run by every horse in the race. It then identifies the ten best BRIS Speed performances of all the horses in the field. A horse can make the list multiple times if more than one of its speed performances makes the top 10 list. We suggest starting with the “Top 10 BRIS Speed Performances” list, which is standard on the ALL-Ways Top 10/Ranking Report. Then, we suggest checking the “Top 10 Hall Speed Performances” list, which can be added to the Top 10/Ranking Report, to see if there is a Hall Speed only horse you may want to add for further consideration. Here is how many of the top 4 finishers made the Top 10 Speed Performances Group.

Number of Top 4 Finishers in the “Top 10 Speed Performances” Group

2009 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL
Races	13	13	13	39
WIN	11	12	12	35
PLACE	11	12	13	36
SHOW	9	10	9	28
4TH	11	10	11	32

2010 Triple Crown Saturdays

	CDX	PIM	BEL	TOTAL
Races	13	13	13	39
WIN	11	12	12	35
PLACE	11	12	11	34
SHOW	11	10	10	31
4TH	9	12	10	31

This shows us that in 2010, 35 of the 39 winners (90%) were in the “Top 10 Speed Performances” Group as well as 34 of 39 (87%) of the place horses, 31 of 39 (79%) of the show horses and 31 of 39 (79%) of the 4th place finishers. And, keep in mind that no races on the Triple Crown Saturday full race cards have been excluded.

Bringing It All Together

Some reminders: First, everything in this article is aimed at handicapping the full race cards on the three Triple Crown Saturdays including the three specific Triple Crown races. Second, the main handicapping task we have been discussing is how to narrow down the full fields of horses to just the horses you want to focus on for your wagers. The “elimination” method this article addresses focuses on four special groups of horses in ALL-Ways software. Overall, if we eliminate all horses that do not appear in at least one group, we find that we can generally shrink the field down by about 40%.

The chart below shows how many groups the top 4 finishers on Triple Crown Saturdays were in. Remember there were a total of 39 races with a total of 156 horses that finished in the top 4 finish positions.

The 156 Top 4 Finishers by Number of Assigned Groups

2009 Triple Crown Saturdays

# Groups	<u>4</u>	<u>3</u>	<u>2</u>	<u>1</u>	<u>0</u>
WIN	29	4	2	2	2
PLACE	26	5	4	2	2
SHOW	19	5	5	7	3
4TH	12	11	9	2	5
Totals	<u>86</u>	<u>25</u>	<u>20</u>	<u>13</u>	<u>12</u>
%	55%	16%	13%	8%	8%

2010 Triple Crown Saturdays

# Groups	<u>4</u>	<u>3</u>	<u>2</u>	<u>1</u>	<u>0</u>
WIN	25	5	7	1	1
PLACE	21	8	4	2	4
SHOW	19	5	6	6	3
4TH	16	8	6	5	4
Totals	<u>81</u>	<u>26</u>	<u>23</u>	<u>14</u>	<u>12</u>
%	52%	16%	15%	9%	8%

This chart is very informative. In both 2009 and 2010, only 12 of the 156 top four finishers in the 39 races were not in one or more of the four groups. **Conversely, a huge 144 of the 156 top 4 finishers were in one or more of the four groups in both 2009 and 2010.** This is powerful. When we look at the missing 12 horses in each year, we find first time starters, foreign horses with no handicapping information, horses going from dirt to turf or turf to dirt, many horses going off at 30 to 1 or higher odds, etc.

From an overall process standpoint, we recommend:

1. Start with horses in the four groups.
2. Determine which of these horses you would be comfortable removing from further consideration.
3. Check horses that are not in any group to see if there is a reason to include any of them in your wagers.
4. Make a final check to make sure you are not missing a high priced closer.

For Non ALL-Ways Handicappers

A “Tip Sheet” Approach

After reading this article, many handicappers who have not used ALL-Ways software will want to have access to the handicapping information presented in the article. And, it is very easy to do, by simply printing out two ALL-Ways handicapping reports, specifically the Search Handicapping Report and the Top 10/Ranking Report. **In other words, it is not necessary to learn all about ALL-Ways Software.** The simple step-by-step instructions for non-ALL-Ways users to take advantage of this powerful handicapping information are posted as the first item on the "What's New Page" of the Frandsen Publishing Web site at www.frandsen.com. Again, there is no need to even look at the ALL-Ways User Manual. Just print the two handicapping reports and use them as “Tip Sheets”.

NOTICE

Before the end of April 2011, this article will be released in a longer format as part of the Frandsen Publishing Favorite ALL-Ways Newsletter Article Series. It will have additional information including, among other things, ideas for identifying some of the few horses that did not make it into one of the four groups. The Favorite Articles are posted in the Newsletter Section of the Frandsen Publishing Web site.

They are free.
