

About ALL-Ways™ Version 14.0 Handicapping Software

To be sure, the advent of All Weather Surface (“AWS”) tracks, such as Poly tracks, has complicated the task of handicapping because of significant changes in pace and post position bias as well as the fact that some horses seem to adapt well to AWS tracks and some do not. **All of this makes it even more important nowadays to handicap on a track specific basis.**

ALL-Ways Version 14.0 comes to the rescue! Not only does ALL-Ways Version 14.0 provide important new “track specific” AWS handicapping information and tools, but it also provides powerful analysis capabilities to compare AWS races against “real” dirt races. This gives you special insight that will provide a distinct advantage over other horseplayers.

For current ALL-Ways handicappers: Version 14.0 provides very powerful tools to easily, automatically and retroactively “purify” your ALL-Ways Race Databases for AWS tracks to include only AWS races and turf races.

New Handicapping Information and Tools

- New information is included about how horses have performed on AWS tracks in general and at today's specific AWS track. This includes many new handicapping factors such as AWS Speed 2/3 and Best AWS Speed at today's track.
- Many new improvements have been made to ALL-Ways software's automatic Pace Line selection including adding an AWS component.
- All past performance races for every horse reflects if the track surface was “real” dirt or AWS.
- Individual horse's AWS performance statistics as well as AWS speed figures have been added to the Contender Summary Report and the Spot Play/Final Process Report.
- An entire AWS section has been added to the Suitability Report.
- New AWS speed factors can be used on the Top 10/Ranking Report. (Incredibly Powerful!)

Another major new handicapping tool is the ability to automatically create special Handicapping Profiles aimed directly at AWS races at today's specific track.

New Analysis Capabilities

Race Screens for segmenting races in your Race Databases can be set for AWS races only or Real Dirt races only or both. This lets you run all the analysis functions in ALL-Ways for these specific race types. This includes the Impact Value Analysis, the Top 3 Analysis, the Gap Advantage Analysis and the Gap Deficiency Analysis, all the Database Run analyses, the Angle Assistant, the testing of Custom Search Definitions and the “forward looking” analyses of Wager Races and Wager Tickets.

Automatic and Retroactive Features

ALL-Ways will automatically generate new track pars and track-to-track adjustments. You can also instruct ALL-Ways to automatically and retroactively mark all prior AWS races in your Race Databases, even for races run before the industry started to identify these AWS races. You can instruct ALL-Ways to automatically delete and/or undelete “real” dirt races from your Race Databases giving you the option of a “pure” Race Database with only turf races and AWS races.

We recommend you immediately download and install ALL-Ways Version 14.0 software from the ALL-Ways Free Software page on BRIS Web site. We will not initially post a complete new User Manual. Instead, you can print the brief Version 14.0 Addendum. The Version 13.5 User Manual coupled with the concise Version 14.0 Addendum covers all the features and capabilities in ALL-Ways 14.0. A new ALL-Ways Version 14.0 User Manual is “in the works” and will be posted at a later date.
