About the Value Plays - Key & Definitions

Value Play Type	Definition
Top Contender	The horse most likely to win the race based on our proprietary pace figure analysis.
Fringe Contender	Any horse projected to finish within a length of the Top Contender.
Breakout	Any horse, often undervalued, expected to improve from previous races that doesn't qualify as a Top or Fringe Contender.
Regressor	Any horse, often overvalued, expected to decline from previous races.
Average	The catch-all classification for remaining horses not expected to fit the definition of all other Play Types.
Too Slow	Any horse considered unlikely to contend for a chance to win.

Win % - This is a value-adjusted probability for each horse's win chances relative to the ML. In other words, instead of assessing the raw win chances of a horse, we are asking ourselves: *How often should we select this horse as the winner with the goal of long-term profit in mind?* Higher live odds being offered would increase a runner's share of the Value Win % and lower live odds being offered would decrease the runner's %.

Best Bet

The runner who fits the profile of the most likely winner regardless of perceived value. This can be most useful when bad morning lines do not closely match live betting odds.

Live Longshot

The runner that stands out most to be overlooked by the public and offer a bigger price with possibilities in play that could compel them to victory.

Final Verdict

This is where we take in the race as a whole considering everything, and use value-based analysis to select the best type of bet to make. Some races are better off left to a simple Win Bet while others present enough risk/reward opportunity to aim for higher payouts and spring for an exacta or trifecta.

The **Value Play Type / Win %** are analyzed using a separate model from the **Betting Picks** classifications. This bi-model approach allows the horseplayer to get a read of confidence and reliability on a race. When the models align (for example, Best Bet is also Top Contender), you know you can key strongly on those opinions for that race. But when the models differ (for example, Best Bet is rated Average), we might expect a bit more chaotic race that might require some flexibility in wagering.

Multi-Race Wagering

These are recommendations when structuring legs of multi-race wagers such as Daily Doubles, Pick 3's, Pick 4's, etc.

Type	Definition
Must Use	Key runners with high win chances and exceptional value that should be included in multi-race wagers.
Next Up	Horses with good win chances and value that deserve strong consideration when looking to add extra runners to your multi-race ticket.
Maybe	These runners have lower win chances but could break through in certain scenarios. They can be considered when looking to spread deep in a race.
Toss	These runners project to offer too low of win chances for too little value and may be bad investments to include on tickets.

⚠ Horse with No Data - Take Caution: First time runners and foreign shippers do not get analyzed. Proceed carefully in these races.
